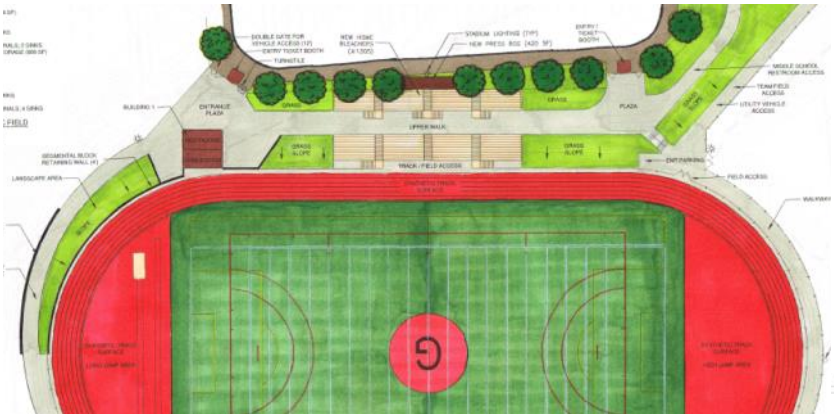
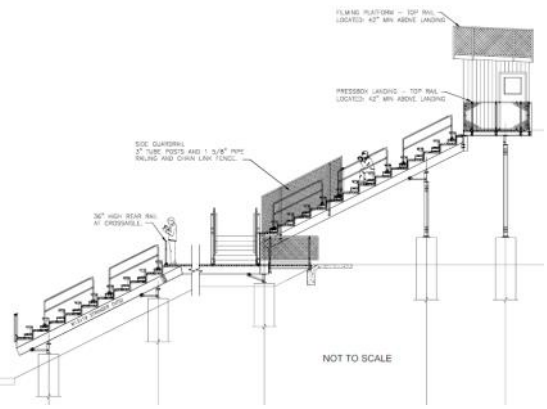
Professional

Turf, Track & Court, LLC (TTC) provides all required professional services for the planning and design of your athletic facilities projects. From existing facilities analysis to detailed construction document development, TTC is dedicated to providing creative, cost effective design services for all of your outdoor athletic facility needs.

Feasibility Studies

TTC provides Facility Analysis / Feasibility Studies to identify all pertinent aspects of your project prior to the initiation of design. Facility Analysis identify and document existing physical conditions, use patterns, spatial relations, and maintenance procedures. Feasibility Studies outline and analyze all contributing factors and typically provide guidelines for the development of your athletic facility. Generally an Analysis and or Studies are prepared for new stadiums, stadium renovations, as well as new or existing running tracks, tennis courts, multiple field complexes, etc.





Master Planning / Design & Layout

Site planning is crucial to the maximization and functionality of your specific spaces. TTC's planning process will identify all components of the facility, athletic venues, traffic patterns, both pedestrian and vehicular, parking needs, infrastructure requirements, environmental considerations, etc. The plan components will be assembled in a logical and practical layout which will lay the groundwork for the physical development of the athletic facility. Master Planning is a crucial phase in the planning, design and construction of your athletic facility projects. The process will provide the most logical, cost effective, phased development plan.

Construction Drawings / Details / Specifications

Construction document preparation includes all aspects of the bidding process, contract negotiation, project conditions, specific construction requirements, as well as concise plan drawings and details required for the proper construction of your athletic facilities. Thorough construction documentation is crucial to educating the contractor of the parameters and specifics of the construction project. Written construction documents will be thoroughly prepared by TTC utilizing industry standard base documents tailored to each project's specific needs. Plan drawings and details are prepared utilizing Auto CADD technology to identify specific tolerances and ensure dimensional requirements meet all of the governing body standards.
