

Running Track Renovations

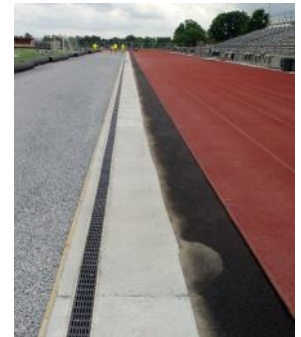

Turf, Track & Court (TTC) has the knowledge and expertise to assist in determining the most cost effective approach for the renovation of your synthetic running track. Synthetic running tracks provide a forgiving stable running and jumping surface for athletes of all levels, However as the systems age, the rubber bases become hard and unforgiving, potentially causing injuries. Depending on age, use and wear patterns, surface renovation may be limited to the application of a new structural spray. More comprehensive renovation techniques may be required if the system is delaminating, showing signs of asphalt or base breakdown.

Construction Process

- Facility Review & Analysis
- Renovation Cost Opinions
- Bid Document Preparation / Administration
- Construction Administration / Observation
- Quality Assurance

TTC provides assistance with the identification and analysis of existing conditions, development of renovation scope, tentative schedule and anticipated budget. Call us today to discuss your upcoming needs and expectations.
