

Tennis Court Renovations

Turf, Track & Court (TTC) has the knowledge and expertise to assist in determining the most cost effective approach for the renovation of your tennis courts. Asphalt tennis courts with acrylic color coatings have dominated the tennis court market. This construction method is the most economical approach for the construction of new courts, however, asphalt courts typically crack over time. These cracks range from surface alligator cracks to wide and deep structural cracks. Historical repair techniques typically provide only a temporary fix. TTC is well versed in the various repair techniques and the advantages and disadvantages of each.

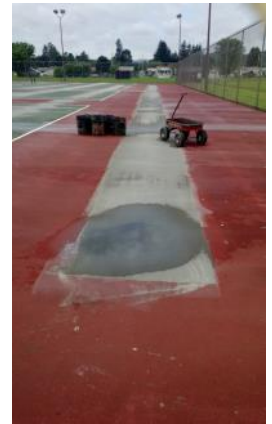

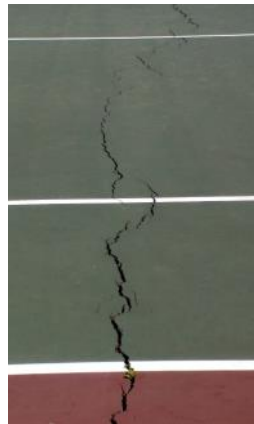

TTC provides assistance with the identification and analysis of existing conditions, development of renovation scope, tentative schedule and anticipated budget. Call us today to discuss your upcoming needs and expectations.

Construction Process

- Facility Review & Analysis
- Renovation Cost Opinions
- Bid Document Preparation / Administration
- Construction Administration / Observation
- Quality Assurance
