- NESD Completion
- CDSD Construction Begins
- Synthetic Turf Cleaning & Repair
- Line Painting
- Surface Testing

Turf, Track and Court, LLC is entering its third spring season and continues to service the needs of the athletic facility market. The comprehensive nature of our services (professional thru on-site maintenance) is unique to the industry and provides a firsthand knowledge based approach to all provided services. We appreciate the trust our past and current client base has in our services and look forward to developing new relationships as the year progresses. TTC approaches each task, whether a simple seam repair on your turf field or a multi-phase stadium reconstruction project, as it is a project in our own back yard. With a commitment to quality and a desire to exceed expectation, we look forward to an opportunity to discuss your needs to identify if our services can be of benefit. Call us today.

Brian S. Bingeman, RLA

Following is a brief outline of service areas and projects we have had the pleasure to be involved with:

PROFESSIONAL SERVICES

Northeastern School District: Baseball Rejuvenation Project

TTC has assisted NESD with the analysis, design, construction documentation and administration for the renovation to the district varsity baseball field. Deemed unsafe for play by the district, the field was removed from play in 2012. Reconstruction is 95% complete, and the field is expected to resume service in 2014 after it grows in.

NESD Baseball Infield

Central Dauphin School District: Stadium Improvements

TTC has assisted CDSD with the study, planning, design, construction documentation, and bid assistance. Renovations / improvements are scheduled to start in early 2013 and conclude mid-August 2013. Improvements include replacement of stadium lighting, bleacher renovations, drainage improvements, new fencing and re-surfacing of the running track.

Gettysburg Area School District: Stadium Improvements Feasibility Study / Master Plan

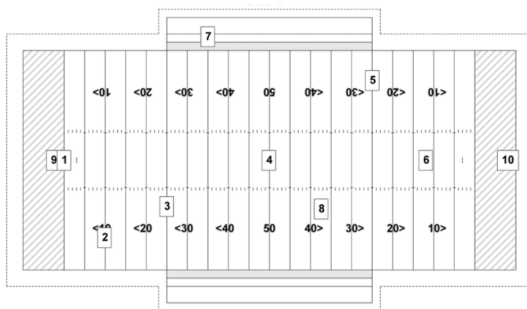

TTC has been contracted to provide professional services for the preparation of a feasibility study for stadium improvements and the development of a stadium master plan. The study / master plan will assist the district with understanding the components of potential stadium improvements and will provide the framework.

SURFACE IMPACT TESTING: Triax 2010 & Clegg

TTC has expanded our commitment of full service athletic facility consulting to include surface impact testing of both synthetic and natural turf surfaces. Testing is provided in accordance with ASTM Standards F355-10a and F1936-10 to test for measured hardness. Initial G-Max testing creates a benchmark by measuring certain shock-absorbing characteristics of turf. It is recommended to test at least once a year to monitor field conditions and gage potential synthetic turf life cycles. Measured results over 200 g's are considered to be unsafe and require remediation to bring that specific area back to an acceptable level.

MAINTENANCE

Field Work - Conditioning

Close proximity to clientele is beneficial for the client. Central PA has a plethora of synthetic turf fields which allows us to be on site at a moment's notice. We aim to provide the best possible service to our clients, whether it is a scheduled service or a last minute seam repair. Our local AHL hockey team, the Hershey Bears, hosted a monumental event on the weekend of January 19 & 20, 2013. The Outdoor Classic took weeks of preparation to erect bleachers and a hockey rink on the synthetic turf field of HersheyPark Stadium. As final preparations were coming to an end, the remaining exposed turf was covered with debris and the fibers had been matted down by the continuous traffic. A day before the Alumni game took place, Turf, Track & Court, LLC was asked to clean the field to remove debris. With careful maneuvering around workers as they continued to assemble the final touches and other obstacles around the rink, we were able to remove debris from the turf and bring the fibers back to a vertical position for a clean, professional appearance for the weekend's events.

Field Painting

Synthetic or natural, TTC has the ability to layout your fields according to NFHS standards as well as develop logos. We can freshen up faded lines, layout new fields for specific sports as well as help design logos for the center of your field or end zones. A multitude of colors are available to match school colors, logos and field striping requirements.

COMMUNITY SERVICES

TTC will be providing field management services for Hershey Little League fields with the daily preparation of eight fields ranging from 90' high school to tee-ball level of play. TTC has provided design and layout services for the construction of a new T-ball field as well as renovations / upgrades to 9-10 age level field.
